E-Mail: info@optec.ch | Internet: www.optec.ch

Types of power factor correction (PFC)

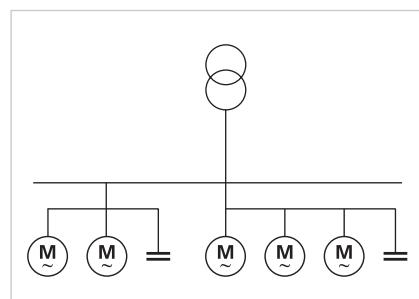

Individual PFC

- A suitably sized capacitor will be connected in parallel to each inductive load
- Relieving of the load on the supply line as well as the switching equipment
- No separate switching equipment required for the capacitor and no controller required
- Economic with longer duty cycles and greater power draw

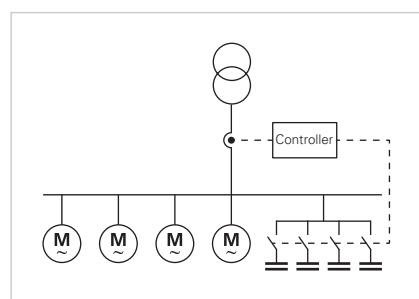

Group PFC

- Will be implemented with load groups with the same operational behaviour
- For multiple inductive loads, that are always operated together
- The supply lines and group switches will be relieved of reactive current and the simultaneity factor results in a smaller capacitor size

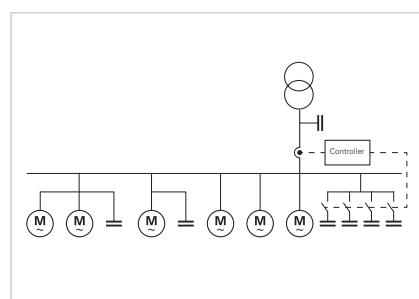

Automatic central PFC (APFC)

- The central PFC will be integrated into the main LV distribution
- Near constant, good power factor that adapts automatically through a power factor controller via contactors or thyristor switches
- The output of the capacitors installed will be better utilised
- Better adaptation of the capacitor power to the reactive power demand
- Networks with harmonics can be more easily detuned through APFC

Mixed PFC

- Combination of individual, group and central PFC

Hybrid switching

Harmonics display

Dynamic PFC

Smart control

Prophi® power factor controller

Interfaces / communication (optional)

- RS485
- Profibus

Power quality

- Harmonics up to the 19th
- THD-U in %
- THD-I in %

Communication / protocols (optional)

- Modbus RTU (up to 115.2 kBit/s)
- Profibus DP V0 (1.5 MBit/s)

Smart control

- Minimised number of switching cycles
- Balanced number of contactor switching cycles
- Optimised service life

Alarm messages

- Under-voltage detection
- Over-voltage detection
- Under-compensation
- Measurement current exceedance
- Harmonics threshold values
- Delivery of active power
- Overtemperature
- Dropping below the minimum measurement current

Triple Safety

- Temperature monitoring
- Monitoring the capacitor switching cycles
- Monitoring of over-current

Network visualisation software

- GridVis®-Basic (in the scope of supply)

Switching outputs (depending on variants)

- 6 conventional relay outputs
- 12 conventional relay outputs
- 6 transistor outputs for dynamic PFC
- 12 transistor outputs for dynamic PFC
- 6 transistor and 6 relay outputs for hybrid PFC

Areas of application

- Automatically controlled power factor correction
- Detuned power factor correction
- Harmonics filter
- Voltage stabilisation by means of dynamic PFC
- Mixed operation (hybrid switching) contactors and thyristor switching

Main features

- Automatic or manual configuration
- Display of U, I, f, Q, P, S, cosphi, all odd current and voltage harmonics, 1 – 19th harmonics
- Display of the indirectly measured capacitor currents
- Display of the switching cycles per capacitor stage
- Display of the total switch-on duration per capacitor stage
- Zero voltage triggering within 15 ms
- Degree of reactors in % for each stage, programmable from 0 to 20 %
- Setting of the discharge time for all stages from 0 to 1200 sec.
- Capacitor outputs individually programmable
- Temperature sensor for fan control
- Overtemperature shut-down programmable
- Control of external semi-conductor switching (max. 50 switching operations per second)
- Current transformer input for 1 A; 5 A
- Password protection
- External, changeable target cosphi 1 and 2 (except 6R / 6T)

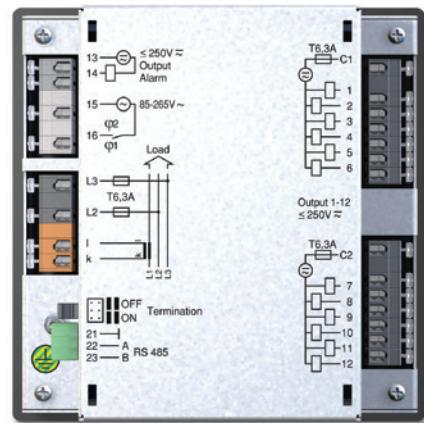

Fig.: Device rear side Prophi® 12RS

Alarm output programmable for ...

- Under-voltage detection
- Over-voltage detection
- Under-compensation
- Measurement current exceedance
- Dropping below the minimum measurement current
- Harmonics threshold values
- Delivery of active power
- Overtemperature

Functional principle

- Single-phase, electronic measurement system
- Acquisition of the active and reactive current portion of the network via the current and voltage circuit
- Reactive power will be calculated with the current from a phase conductor and the voltage between two phase conductors

- Switching ON or OFF of capacitor stages in the event of deviations in the set power factor
- Switching of capacitors via contactors or semiconductors
- Control via capacitor contactors is implemented in an optimised manner
- Transistor outputs for the near-realtime control of semiconductor switches

Fig.: Display examples: Voltage

Fan control

- Fan control via integrated temperature sensors
- Either via relay outputs or the alarm relay
- Programming of a lower or upper limit temperature necessary

Fig.: Reactive power

Automatic configuration

- With the "LEARN" function it is possible to learn and save the connection configuration of the power factor controller

Fig.: Harmonics

LCD display

- High quality LCD display with excellent contrast
- Display of comprehensive measurement parameters (app. 100 measured values)

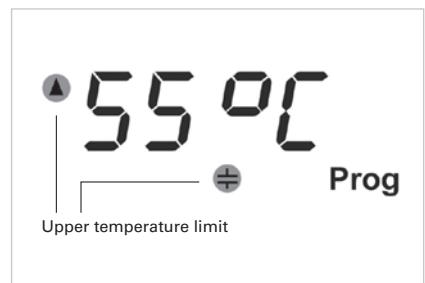

Fig.: Overtemperature shut-down

Overtemperature shut-down

- The overtemperature shut-down switches off connected capacitor stages
- This results in the reduction of the interior temperature of the PFC cabinet and protects the capacitors
- Programming of a lower or upper limit temperature as well as the pause time

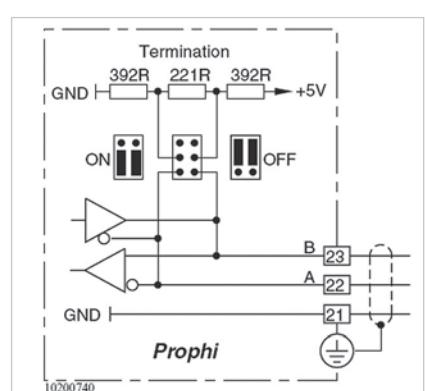

Fig.: Connection assignment - RS485 interface

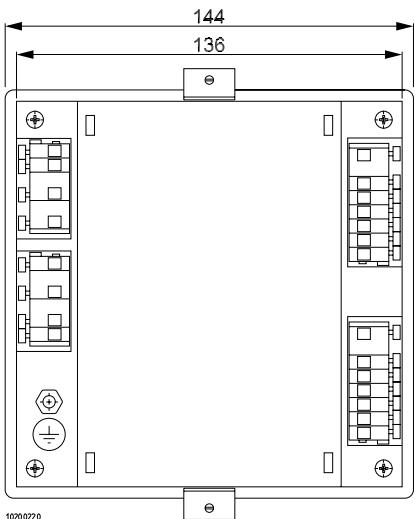

Interface

- Depending on version, equipped with an RS485 interface
- The Modbus RTU or Profibus DP V0 protocols are available via RS485
- Integration of PLC systems, building management systems or energy management systems
- Modbus transfer rates: 9.6; 19.2; 38.4; 57.6; 115.2 kBit/s
- Profibus transfer rates: Up to max. 1.5 Mbit/s

Comment: For detailed technical information please refer to the operation manual and the Modbus address list.

*⁷ Devices with the "RS485 interface" option are only suitable for an operating temperature range of -10 to +50 °C.

Power factor correction (PFC)

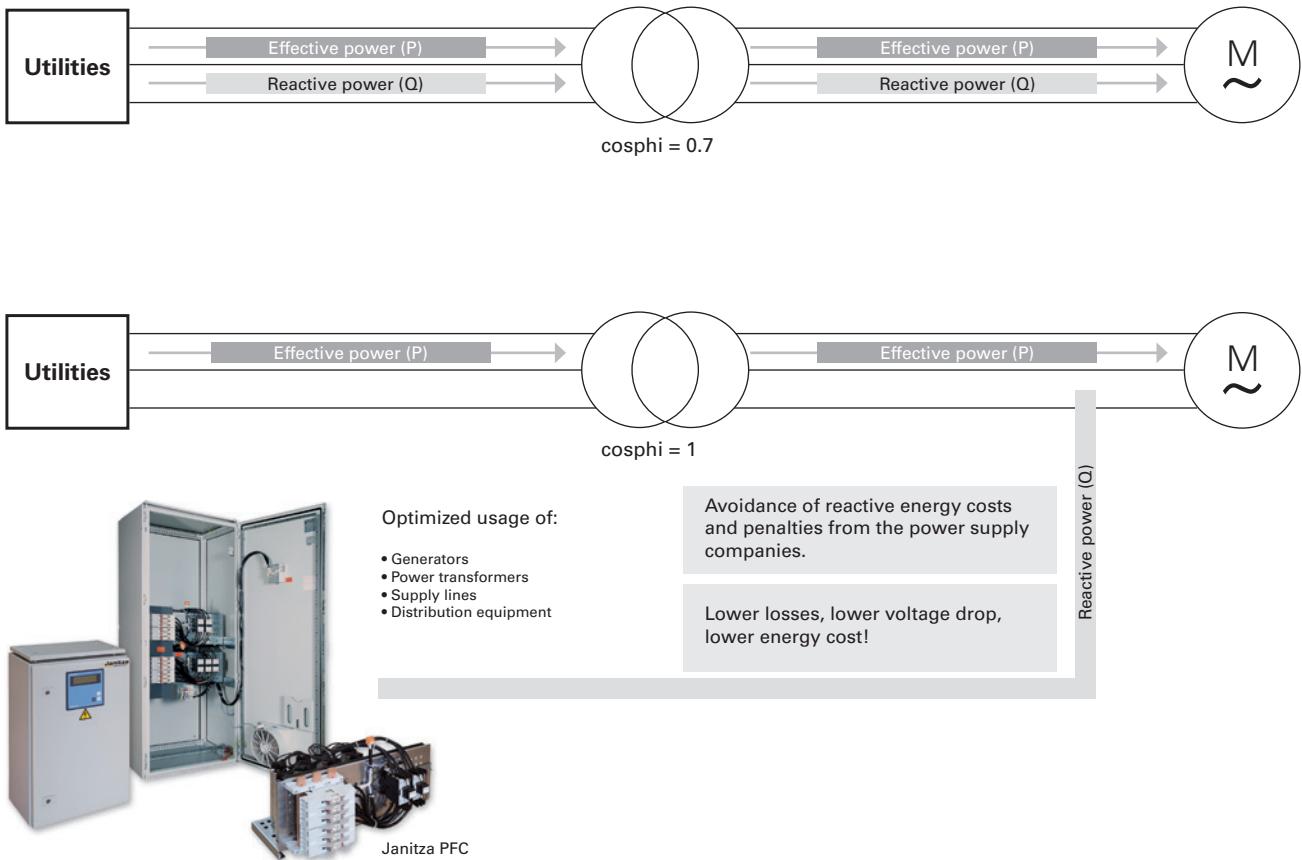

Fig.: Active and reactive power in the mains with PFC

Hybrid switching

Harmonics display

Dynamic PFC

Smart control

Prophi® 7 power factor controller

Interfaces / communication

- RS485

Communication / protocols

- Modbus RTU
- Modbus KTR
- ASCII Out
- Extern
- Slave Hybrid
- Slave Mode
- Master Mode

Triple Safety

- Temperature monitoring
- Monitoring the capacitor protective switching cycles
- Monitoring of over-current
- Single-phase reactive current compensation monitoring

Measuring voltage

- 3-phase
- 50–760 V (L-L), 30–440 V (L-N)

Power quality

- Harmonics up to the 33rd
- THD-U in %
- THD-I in %

Intelligent control

- Minimised number of switching cycles
- Compensated number of contactor switch cycles
- Optimised service life
- Mixed control (single and three-phase)
- Separate control of single-phase capacitors
- Sequential switching
- Cyclic switching

Switching outputs

- 15 relay outputs, freely programmable
- 12 transistor and 12 relay outputs for hybrid PFC

Alarm messages

- Undervoltage detection
- Overvoltage detection
- Under-compensation
- Measurement current exceedance
- Harmonics threshold values
- Delivery of active power
- Overtemperature
- Dropping below the measurement current
- C-defect
- Modbus error
- Switching cycle warning

Display mode

- Display three measured values simultaneously
- Graphical representation of harmonics in bar graph form
- Three-digit display of power factor ($\cos \phi$), switchable ($\tan \phi$)
- Display of controlled steps, fault messages and time
- Display of apparent current, active current and reactive current in display mode

Areas of application

- Automatically regulated power factor correction
- Choked power factor correction
- Harmonics filter
- Voltage stabilisation by means of dynamic PFC
- Mixed operation (hybrid switching) contactors and thyristor switching

Main features

- 12 or 13 switching outputs
- Extended measured voltage range (up to 760 V ~ L-L)
- Control of inductive compensation systems possible
- 20 pre-programmed control series
- Control series editor
- Graphical display 128 x 64 pixels
- Plain language menu navigation
- Four-quadrant operation
- Automatic initialisation
- Display of various grid parameters
- Display of harmonics
- Display of distortion factor THD-V / THD-I
- Monitoring of the capacitor current
- Saving of the maximum values
- Saving of the switching cycles and times
- Manual / Automatic mode
- Zero voltage shutdown
- Various error messages / alarm relay
- Error memory
- Test run of the system with error analysis
- Control of inductive compensation systems possible
- Voltage, current, frequency, active power, reactive power, apparent power
- Harmonics of the voltage (up to the 33rd / up to the 16th (even))
- Harmonics of the current (up to the 33rd / up to the 16th (even))

Alarm output programmable for ...

- Undervoltage detection / Overvoltage detection
- Under-compensation / Over-compensation
- Under-current / Over-current
- Harmonics threshold values
- Delivery of active power
- Overtemperature
- Message for delivery of active power
- Measured voltage error
- Switching cycle warning
- Modbus error
- C-defect

Fig.: Auto-Mode

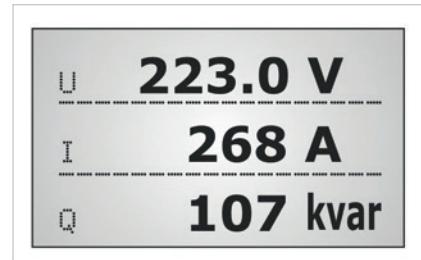

Fig.: Display-Mode

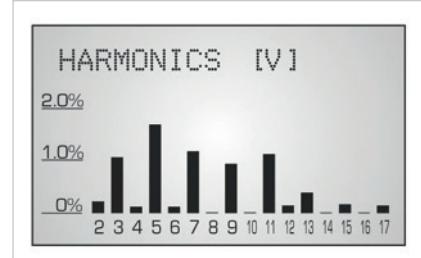

Fig.: Bargraph-Mode

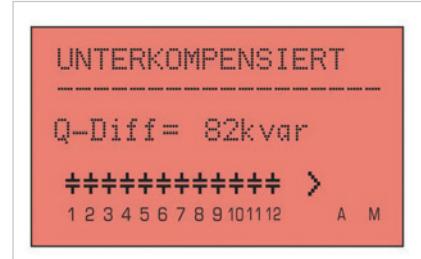

Fig.: Error message (customisable backlight)

Functional principle

- Single-phase/three-phase electronic measurement system
- Detection of the reactive and active current portion of the grid via the current and voltage circuit
- Switching in or out of the capacitor stages via the outputs in the event of deviations in the set power factor
- Switching of capacitors via contactors or semiconductors
- Regulation via capacitor air contactors is implemented in an optimised manner
- Transistor outputs for the near-realtime control of semiconductor switches

Fan control

- Development of fan control via integrated temperature sensors and a fan
- Uses the signal relay
- Programming of a lower or upper limit temperature necessary

LCD display

- Graphical display 128 x 64 pixels
- Display a comprehensive selection of measurement parameters

Overtemperature shut-down

- The overtemperature shut-down switches off the capacitor stages connected
- This results in the reduction of the interior temperature of the switching cabinet and protects the capacitors
- Programming of a lower or upper limit temperature as well as the pause time

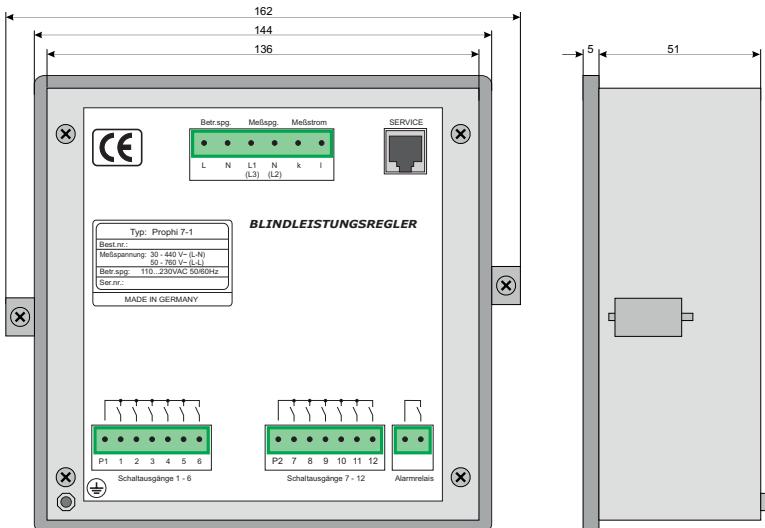

Interface

- Two independent potential-free RS485 interfaces
- The Modbus RTU, Modbus KTR, ASCII out, Slave Hybrid, Slave Mode, and Master Mode protocols are available via the RS485s
- Integration of PLC systems, building management systems or energy management systems
- Modbus transfer rates: 9.6 – 256 kBit/s

*⁴ Devices with the "RS485 interface" option are only suitable for an operating temperature range of -10 to +50 °C.

Prophi®7 power factor controller

The universal capacitor monitoring system

- Continuous capacitor monitoring**
- Over-current limit value
 - Under-current limit value
 - Unbalance limit value
 - Temperature limit value
 - Harmonics limit value
 - Voltage limit value
 - Number of switching cycles

- Safety**
- Timely detection of capacitor aging
 - Timely replacement of contactors
 - Prevention of fire damage
 - Prevention of downtimes

- Interfaces**
- Ethernet
 - RS232
 - RS485

- Communication**
- Profibus (DP/ V0)
 - Modbus (RTU, TCP, Gateway)
 - TCP/IP
 - BACnet (optional)
 - HTTP (Homepage)
 - FTP (file transfer)
 - SNMP
 - TFTP
 - NTP (time synchronisation)
 - SMTP (email function)
 - DHCP

- Power quality**
- Harmonics up to 40th harmonic
 - Short term interruptions
 - Transient recorder (> 50 µs)
 - Inrush currents (> 20 ms)
 - Imbalance
 - Full cycle RMS recordings (up to 4.5 min.)

- Measured data memory**
- 128 MByte Flash
 - 16 MB RAM

- 2 digital outputs**
- Pulse output kWh / kvarh
 - Switch output
 - Threshold value output
 - Logic output

- Thermistor input**
- PT100, PT1000, KTY83, KTY84

PFC protection – Capacitor monitoring

Item no.: 52.16.300

- Increases the safety of PFC systems
- Monitoring of all overload scenarios by means of the UMG 604E
- Timely detection of capacitor overloading as well as short circuits

Main features

- Measurement 3-phase, 3 CTs in the supply line for the PFC system
- PFC-APP (Jasic® monitoring software on UMG 604E)
- Monitoring of: Short-circuit to ground, over-current and under-current, overvoltage, unbalance, switching frequency, temperature, etc.
- Additional, comprehensive network analysis functions
- Extensive analysis options via GridVis®-Basic software
- Integration into networks with Ethernet or RS485-Modbus RTU
- Flexible alarm system with monitoring of up to 32 measured values
- Menu-driven user guidance in plain text on the UMG 604E homepage

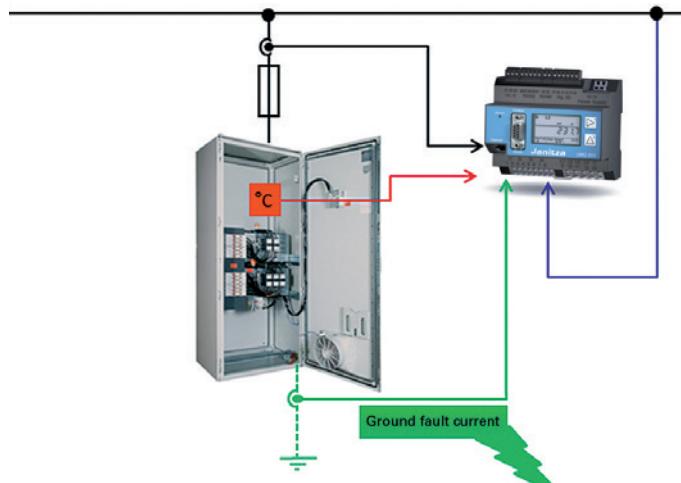

Fig.: Monitoring of short-circuits to ground, temperature, over-current etc. with the power analyser UMG 604E

Fig.: Capacitor monitoring in a PFC system

Fig.: Monitoring of limit values via UMG 604E homepage

PFC power capacitors

High tolerance of inrush currents

- Optimised metal spraying process
- Wave-cut film

Long service life

- Highend impregnation technology
- Good thermal dissipation
- High quality base materials

Fivefold safety

- Self-healing technology
- Dry technology
- Over-pressure disconnector
- Segmented capacitor film
- Integrated discharge device

Reliable connection technology

- Connection adapter for reliable long term connections

Areas of application

- Motor fixed PFC
- Group PFC
- Automatic power factor correction
- Detuned power factor correction systems
- Harmonics filter
- Dynamic power factor correction systems

Main features

Fivefold safety

- Self-healing technology
- Dry technology
- Over-pressure disconnector
- Segmented capacitor film
- Integrated discharge device

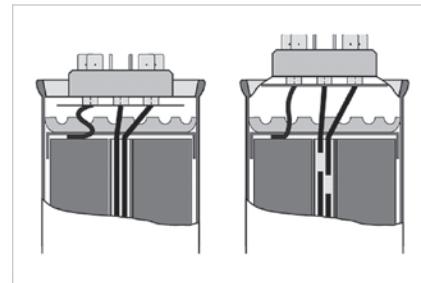

Fig.: Principle of over-pressure disconnector

Fig.: Self-healing, segmented capacitor film

Long service life (up to 170,000 hours) and high operational reliability

- Highend impregnation technology
- Excellent thermal dissipation
- High quality base materials

Fig.: The connection adapter offers a low transfer resistance and a permanent, fixed electrical and mechanical contact

Reliable connection technology

- Connection adapter for reliable long term connections

High inrush currents withstand capability

- Optimised metal spraying process
- Wave-cut film design

High of overload withstand capability

- Max. over-current: 2.2 In
- Max. inrush current: 300 x In

Low loss

- 0.2 Watt/kvar dielectric loss
- 0.5 Watt/kvar total power dissipation

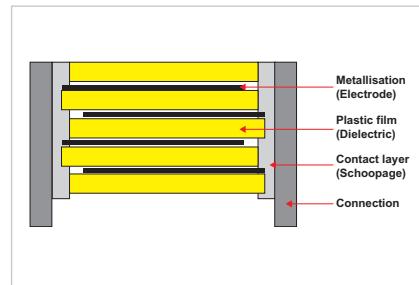

Fig.: Contacting (metal spraying) of the metallised Polypropylene film (Dielectric)

Technical data

Technical data and limit values for power capacitors		
Standards		IEC 60831-1+2, EN 60831-1+2
Output range	QR (kvar)	0.3 – 40
Nominal voltage range	UR (V)	400 V* ¹
Over-voltage	U _{max}	Un + 10 % (up to 8 h daily) / Un + 15 % (up to 30 mins daily) Un + 20 % (up to 5 mins daily) / Un + 30 % (up to 1 min daily)
Overcurrent	I _{max}	2.2 x In (at nominal voltage, 50 Hz)
Inrush current withstand capability	IS	Up to 300* In
Dielectric losses	P _{diel.}	< 0.2 Watt per kvar
Total capacitor losses	P _v	< 0.5 Watt per kvar
Nominal frequency	f	50 / 60 Hz
Capacitor tolerance		-5 ... + 10 %
Test voltage (terminal / terminal)	V _{TT}	2.15 x Un, AC, 2 s / 1.85 x Un, AC, 18 s
Test voltage (terminal / housing)	V _{TC}	3,900 V, 2 s
Service life expectancy	t LD(Co)	Up to 170,000 h
Ambient temperature		Class: -25/D Max. temperature +65 °C Max. 24 h average = +45 °C Max. 1 year average = +35 °C Lowest temperature = -40 °C
Max. housing temperature	T _g	+75 °C
Air humidity	H _{rel}	max. 95 %
Operating altitude		max. 4,000 m above sea level
Fastening and grounding		M12 threaded bolts and house base
Safety		Dry technology, over-pressure disconnector, self-healing, max. permissible fault current 10,000 A per UL-810 standard
Discharging		Discharge resistors
Housing		Aluminium can and sheet steel housing
Protection class		IP20, indoor installation (optionally with IP54 terminal covering)
Dielectric		Polypropylene film
Impregnation		Dry
Number of switching cycles per year		Max. 60,000 switching cycles in accordance with IEC 60831 (with capacitor contactors)

*¹ Nominal voltage 400 V illustrated in the catalogue. 230 – 800 V on request.

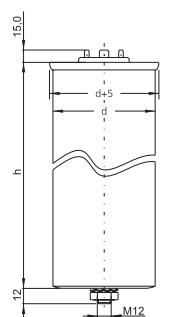

3-phase power capacitors in aluminium cans

Main features

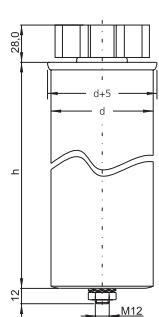

- PFC power capacitors in aluminium cans
- Delta connection
- With discharge resistors
- Long service life, low loss

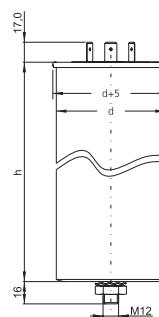

Dimension diagrams

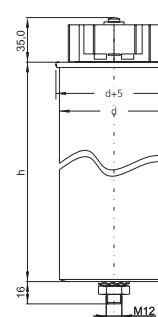

Capacitor with
d = 60 / 70 mm
for connection with
flat connector

Automatic power factor correction systems without reactors

**High tolerance of start-up currents
inrush current withstand capability**

- Optimised metal spraying process
- Wave-cut film design
- Capacitor contactors with pre-closing contacts for inrush current damping

Long service life

- Generous space- / power-ratio
- Generously dimensioned cooling system
- High quality capacitors

High operational reliability

- Capacitors with fivefold safety system
- PFC controller with 8-way alarm message
- Heavy duty sheet steel cabinets
- Optimised thermal design
- Exclusive use of quality components

Areas of application

- Automatic Power Factor Correction (APFC)
- For use in mains supply with low harmonics distortion
- Converter power (non-linear loads) < 15 % of total connection power
- Total harmonic distortion of THD-U < 3 %
- No combined use in networks with de-tuned capacitors
- No use with critical ripple control systems in the range 270 to 425 Hz

Device overview and technical data

Power factor correction without reactors		
Standards	DIN, VDE 0660 part 500, EN 60439-1 and EN 60831-1/2	
Design	DIN EN 60439 part 1, partial type-approved combination	
Construction type	Sheet steel cabinet for versions KB and ES, module for version MO	
PFC controller	Prophi® per datasheet or selection table	
Power capacitors	High quality, self-healing, polypropylene 3-phase capacitors using dry technology	
Contactors	Specific capacitor contactors with pre-charging resistors	
Capacitor protection	HRC fuses, 3-phase, per capacitor stage	
Nominal voltage	400 V, 50 Hz (other voltages on request)	
Control voltage	230 V, 50 Hz (other voltages on request)	
Output range	10 – 600 kvar (alternative staging, powers on request)	
Capacitor nominal voltage	440 V without reactors	
Voltage withstand capability of capacitors	8 h daily	484 V
	30 min daily	506 V
	5 min	528 V
	1 min	572 V
Power dissipation	Capacitors < 0.5 W/kvar, systems 4 – 7 W/kvar	
Switching cycles capacitor contactors	max. 100,000 switching cycles	
Current transformer connection	... /1 A, .../5 A	
Control ratio	See overview of variants	
Discharging	With discharge resistors per EN 60831-1/2	
Maximum altitude	Up to 2,000 m above sea level	
Ambient temperature	35 °C per DIN EN 60439 part 1 (temperature class of the capacitors should be assured with adequate ventilation/cooling at the place of installation!)	
Protection class	Cabinet version = IP32 / Slide-in module = IP00	
Type of cooling	Forced ventilation (except slide-in modules)	
Colour	Grey, RAL 7035 (other colours on request)	
Noise emission (FK)	< 60 dB with closed systems at 1 m distance	
Connection cross-section and fuse	See technical annex	

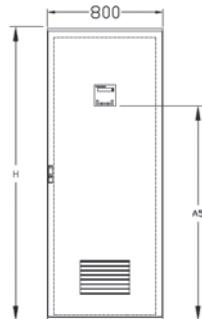

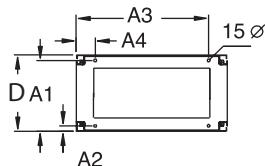

Automatic power factor correction in modular design (up to 500 kvar ...)

Main features

- APFC in the steel cabinet
- For free-standing installation
- Nominal voltage: 400 V, 3-phase, 50 Hz
- Protection class: IP32
- With natural convection (air exchange)
- With discharge resistors
- With power factor controller Prophi® 6R/12R

Dimension diagrams

Automatic de-tuned power factor correction systems

Optimised filter design

- Precise filter circuit frequency matching
- High quality reactors
- Temperature protection in the event of overload
- Filter circuit reactors with high linearity and low loss

Long service life

- Generous space- / power-ratio
- Generously dimensioned cooling system
- High quality capacitors and filter circuit reactors with 100 % duty cycle

High operational reliability

- Capacitors with fivefold safety
- PFC controller with 8-way alarm message
- Optimised thermal design
- Exclusive use of quality components

Areas of application

- Automatic power factor correction with reactors
- For use in mains supply with harmonics distortion
- Converter power (non-linear loads) > 15 % of the connection power
- Total harmonic distortion of THD-U > 3 %
- To prevent cases of resonance
- Harmonics filtering and improvement of power quality
- Reduction in reactive energy costs and PFC penalties

Device overview and technical data

De-tuned power factor correction				
Technical data				
Standards	DIN, VDE 0660 part 500, EN 60439-1 and EN 60831-1/2			
Design in accordance with	DIN EN 60439 part 1, partial type-approved combination			
Construction type	Sheet steel cabinet for versions KB and ES, module for version MO			
Dynamic PFC controller	Prophi® per datasheet or selection table			
Power capacitors	High quality, self-healing, polypropylene 3-phase capacitors using dry technology			
Filter circuit reactors	Low-loss 3-phase reactors with high linearity, 7%, 14% (other ratings on request), with 100% duty cycle			
Contactors	Specific capacitor contactors			
Capacitor protection	HRC fuses, 3-phase, per capacitor stage			
Nominal voltage	400 V, 50 Hz (other voltages on request)			
Control voltage	230 V, 50 Hz (other voltages on request)			
Output range	10 – 600 kvar (alternative staging, outputs on request)			
Capacitor nominal voltage	440 V with 5.67 – 7 % (detuned), 525 V with 14 % (detuned)			
Voltage withstand capability of capacitors	At p = 5.67 – 7 %	440 V	At p = 14 %	525 V
	8 h daily	484 V		577 V
	30 min daily	506 V		604 V
	5 min	528 V		630 V
	1 min	572 V		682 V
Power dissipation	Capacitors < 0.5 W/kvar, systems 4 – 7 W/kvar			
System design		Permissible harmonics currents	Harmonics voltage	
		I 250 Hz	I 350 Hz	U 250 Hz
FK 5.67		0.565 IN	0.186 IN	5 %
FK 7		0.31 IN	0.134 IN	5 %
FK 14		0.086 IN	0.051 IN	5 %
Switching cycles capacitor contactors	max. 100,000 switching cycles			
Current transformer connection	... /1 A, .../5 A			
Control ratio	See overview of variants			
Discharging	With discharge resistors per EN 60831-1/2			
Maximum altitude	Up to 2,000 m above sea level			
Ambient temperature	35 °C per DIN EN 60439 part 1 (temperature class of the capacitors should be assured with adequate ventilation/cooling at the place of installation!)			
Protection class	Cabinet version = IP32 / Slide-in module = IP00			
Type of cooling	Forced ventilation (except slide-in modules)			
Colour	Grey, RAL 7035 (other colours on request)			
Noise emission (FK)	< 60 dB with closed systems at 1 m distance			
Connection cross-section and fuse	See technical annex			
The following reactors can be used in mains supply with ripple control systems:				
Ripple control frequency	De-tuning factor		Filter series resonant frequency	
< 168 Hz	p = 14 %		fr = 134 Hz	
168 – 183 Hz	p = 14 / 5.67 %		fr = 134 / 210 Hz	
> = 216.67	p = 8 %		fr = 177 Hz	
> 228 Hz	p = 7 %		fr = 189 Hz	
> 350 Hz	p = 5.67 %		fr = 210 Hz	

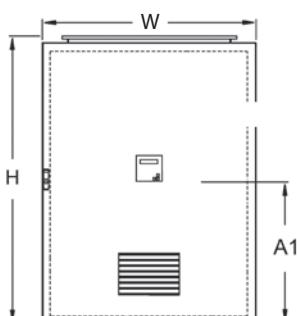

Automatic de-tuned power factor correction (Harmonics filter), compact design

Main features

- APFC in the steel cabinet
- For wall mounting
- Nominal voltage: 400 V, 3-phase, 50 Hz
- Reactors: 7 % and 14 %
- Protection class: IP32
- Ventilation: From 31 kvar with fan in the cabinet door for forced cooling
- With discharge resistors
- With power factor controller Prophi® 6R

7 % de-tuned power factor correction (harmonics filter), extractable design ES8206 FK7

Main features

- APFC in steel cabinet (free-standing mounting)
- Nominal voltage: 400 V, 3-phase, 50 Hz
- Reactor: 7 % (189 Hz series resonant frequency)
- Protection class: IP32
- Ventilation: From 120 kvar with fan in the cabinet door for forced cooling
- With power factor controller Prophi® 6R/12R

Dimension diagrams

ES8206 (dimensions in mm):
H = 2.020, W = 800 or 1.600, D = 600
A1 = 537, A2 = 63, A3 = 737, A4 = 62, A5 = 1,480

De-tuned capacitor modules, extractable design

Main features

- Ready-to-install, de-tuned PFC slide-in modules
- Completely mounted and wired with capacitors, reactors, contactors and HRC-fuses
- For slide-in installation in existing PFC or switchgear cabinets
- Nominal voltage: 400 V, 3-phase, 50 Hz
- Reactors: 7 % (189 Hz) and 14 % (134 Hz)
- Protection class: IP32
- Ventilation: Natural (care must be taken to ensure sufficient ventilation)
- With discharge resistors

Dimension diagrams

Dimensions in mm:

H = 330, W = 703, D = 533

A1 = 290, A2 = 14, A3 = 26.5

Dynamic power factor correction systems (real time PFC)

Optimised,
thermal design

De-tuned version

Long service life

Minimised
grid distortion

Dynamic power factor correction systems (real time PFC)

Hardly any mains supply distortion

- Switching at zero point transition
- No inrush currents
- Stabilisation of the mains supply voltage
- Reduction of harmonics distortion
- Switching times < 20 ms

Long service life

- Generous space- / power-ratio
- Generously dimensioned cooling system
- High quality capacitors and filter circuit reactors

High operational reliability

- Capacitors with fivefold safety
- PFC controller with 8-way alarm message
- Filter circuit reactors with high linearity and 100% duty cycle
- Optimised thermal design
- Exclusive use of quality components
- Thyristor switch for capacitor connection without mains supply distortion

Areas of application

- Use in applications with fast and high load changes
- APFC in LVDB
- For use in mains supply with harmonics burden
- Converter power (non-linear loads) > 15 % of the connection power
- Total harmonic distortion of THD-U > 3 %
- Harmonics filtering and improvement of power quality
- Reduction in reactive current costs
- Stabilisation of the mains supply voltage

Typical applications

- Automotive industry (welding systems, presses, etc.)
- Lift systems and cranes
- Start-up compensation for large motors
- Drilling rigs in oil production
- Wind turbines
- Welding technology
- Steel production
- Plastic injection moulding systems
- Fishing vessels

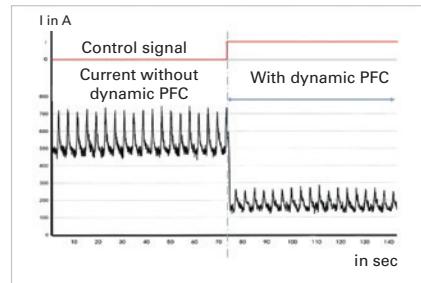

Fig.: Current reduction by means of dynamic PFC

Particular advantages

- Improved power quality, i.e. avoidance of high start-up currents for the power capacitors
- Significant extending the service life for the PFC system
- Safety of the complete system is significantly increased (i.e. avoidance of damages through defective contactors and subsequent exploding capacitors)
- Ultra-fast compensation of power factor, resulting in a reduction in the reactive current costs and kWh losses
- Voltage stabilisation (e.g. contactors support during the start-up phase of large motors)
- Improved utilisation of the energy distribution (transformers, cabling, switchgear, etc.) through the elimination of power peaks
- Shortening of process times (e.g. welding) due to stabilized voltage

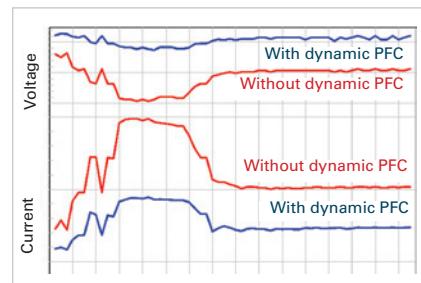

Fig.: Comparison of current and voltage with and without dynamic PFC when starting up a large motor

Device overview and technical data

Dynamic power factor correction				
Technical data				
Standards	DIN, VDE 0660 part 500, EN 60439-1 and EN 60831-1/2			
Design in accordance with	DIN EN 60439 part 1, partial type-approved combination			
Construction type	Sheet steel cabinet for versions KB and ES, module for version MO			
Dynamic power factor controller	Prophi®T version per datasheet or selection table			
Power capacitors	High quality, self-healing, polypropylene 3-phase capacitors using dry technology			
Filter circuit reactors	Low-loss 3-phase reactors with high linearity, 7%, 14% (other reactor ratings on request)			
Electronic switch ($t < 20$ ms)	Thyristor actuator for switching in the zero point transition (to avoid network disturbances)			
Capacitor protection	Ultra-fast electronic fuses			
Nominal voltage	400 V, 50 Hz (other voltages on request)			
Control voltage	230 V, 50 Hz (other voltages on request)			
Output range	10 – 600 kvar (alternative staging, outputs on request)			
Capacitor nominal voltage	440 V with out reactors and 5.67 – 7 % (choked), 525 V with 14 % (reactors)			
Voltage withstand capability of capacitors	At $p = 5.67 - 7$ %	440 V	At $p = 14$ %	525 V
	8 h daily	484 V		577 V
	30 min daily	506 V		604 V
	5 min	528 V		630 V
	1 min	572 V		682 V
Power dissipation	Capacitors < 0.5 W/kvar, systems 4 – 7 W/kvar			
System design		Permissible harmonics currents	Harmonics voltage	
		I 250 Hz	I 350 Hz	U 250 Hz
FK 5.67		0.565 IN	0.186 IN	5 %
FK 7		0.31 IN	0.134 IN	5 %
FK 14		0.086 IN	0.051 IN	5 %
Current transformer connection	... /1 A, .../5 A			
Control ratio	See overview of variants			
Discharging	With discharge resistors per EN 60831-1/2			
Maximum altitude	Up to 2,000 m above sea level			
Ambient temperature	35 °C per DIN EN 60439 part 1 (temperature class of the capacitors should be assured with adequate ventilation/cooling at the place of installation!)			
Protection class	Cabinet version = IP32 / Slide-in module = IP00			
Type of cooling	Forced ventilation (except slide-in modules)			
Colour	Grey, RAL 7035			
Noise emission (FK)	< 60 dB with closed systems at 1 m distance			
Connection cross-section and fuse	See technical annex			

The following reactors can be used in mains supply with ripple control systems:

Mains supply ripple control frequency	De-tuning factor	Filter series resonant frequency
< 168 Hz	$p = 14$ %	$fr = 134$ Hz
168 – 183 Hz	$p = 14 / 5.67$ %	$fr = 134 / 210$ Hz
> 216.67	$p = 8$ %	$fr = 177$ Hz
> 228 Hz	$p = 7$ %	$fr = 189$ Hz
> 350 Hz	$p = 5.67$ %	$fr = 210$ Hz

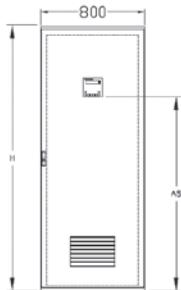

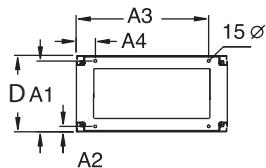

7 % de-tuned dynamic power factor correction, extractable design ES8206 FKTh

Main features

- Dynamic ($t < 20$ ms), de-tuned APFC in extractable design in steel cabinet
- Modular cabinet for free-standing mounting (expandable in output)
- Nominal voltage: 400 V, 3-phase, 50 Hz
- Reactors: 7 % (189 Hz series resonant frequency)
- Protection class: IP32
- Ventilation: From 120 kvar with fan in PFC cabinet door for forced cooling
- With power factor controller Prophi® 6T / 12T

Dimension diagrams

14 % de-tuned dynamic power factor correction, extractable design ES8206 Th

Main features

- Dynamic ($t < 20$ ms), de-tuned APFC in extractable design in steel cabinet
- Modular cabinet for free-standing mounting (expandable in output)
- Nominal voltage: 400 V, 3-phase, 50 Hz
- Reactors: 14 % (134 Hz series resonant frequency)
- Protection class: IP32
- Ventilation: From 120 kvar with fan in PFC cabinet door for forced cooling
- With power factor controller Prophi® 6T / 12T

Dimension diagrams

De-tuned, dynamic PFC modules extractable design

Main features

- Dynamic ($t < 20$ ms), de-tuned APFC in extractable design in steel cabinet
- For installation in existing switch gear or PFC cabinets
- Nominal voltage: 400 V, 3-phase, 50 Hz
- Reactors: 7 % (189 Hz series resonant frequency),
14 % (134 Hz series resonant frequency)
- Protection class: IP32
- Ventilation: Natural cooling
(care must be taken to ensure sufficient ventilation)
- With discharge resistors

Dimension diagrams

dimensions in mm:
 $H = 330$, $W = 703$, $D = 550$
 $A1 = 290$, $A2 = 14$, $A3 = 26.5$

PFC-Accessories

Dynamic power factor correction

Thyristor control modules		
Item	Weight in kg	Item no.
Control module with Prophi® 6T controller (for 6 capacitor stages) MCCB, CT terminals and 2 m connection cable (mounted on the capacitor module)	3	50.10.003
Control module with Prophi® 12T controller (for 12 capacitor stages) MCCB, CT terminals and 2 m connection cable (mounted on the capacitor module)	3	50.10.004

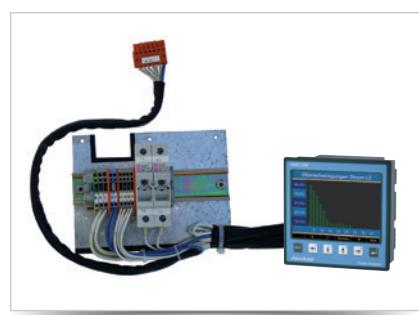

Fixing rails		
Item	Weight in kg	Item no.
Set fixing rail, left / right (for Rittal cabinets MO84)	1	50.00.100
Set fixing rail, left / right (for Rittal cabinets MO86)	1.5	50.00.101

Accessory – Passive harmonics filter

Control modules		
Item	Item no.	
Control module with Prophi® 6R controller, 6 stages (relay outputs) MCCB, CT terminals and 2 m connection cable (mounted on the capacitor module)	50.80.003	
Control module with Prophi® 12R controller, 12 stages (relay outputs) MCCB, CT terminals and 2 m connection cable (mounted on the capacitor module)	50.80.004	

Fixing rail for slide-in modules in Rittal switch gear cabinets		
Item	Item no.	
Set fixing rail, left / right (for Rittal cabinets MO84)	50.00.100	
Set fixing rail, left / right (for Rittal cabinets MO86)	50.00.101	

Power analyser with Ethernet connection and PQ analysis software		
Item	Item no.	
UMG 508	With display, front panel mounting	52.21.001
UMG 604E	DIN rail mounting	52.16.002

See main catalogue chapter 02 "Energy and power quality measurement products" for other variants

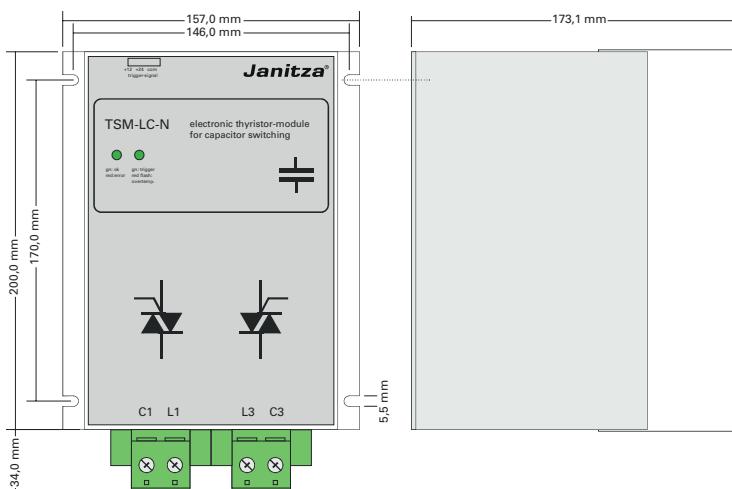

Electronic circuit breaker (thyristor controller)

Main features

- Areas of application: dynamic compensation of rapid processes (presses, welding machines, lifts, power plants, wind turbines, etc.)
- Component for developing dynamic compensation systems
- Optimisation of switching behaviour by microprocessor-controlled adaptation to unchoked or choked capacitor branches
- No wearing parts
- Monitoring of voltage, phase, temperature
- Instant switching
- No mains feedback from switching operations (transients)
- No auxiliary voltage required
- Maintenance-free
- Long service life
- No switching noise
- Improved connection technology (connectors)
- Improved temperature management

Dimension diagrams

Technical data

Nominal output kvar	Nominal voltage V (50/60 Hz)	Control V DC	Type	Dimensions in mm (W x H x D)	Superfast fuse in A	Weight in kg	Item no.
12,5	400	10 – 24	TSM-LC 10 THY (400 V / 12,5 kvar)	162 x 150 x 75	35	1,75	01.02.504
25	400	10 – 24	TSM-LC-N 25THY (400 V / bis 25 kvar)	157 x 200 x 173	63	4,80	01.02.516
50	400	10 – 24	TSM-LC-N 50THY (400 V / bis 50 kvar)	157 x 200 x 173	125	4,80	01.02.515
50 – 85	400 – 690	10 – 24	TSM-LC-N690THY (690 V / bis 50 kvar)	157 x 200 x 190	125	4,80	01.02.514
